

Questetra: Cloud BPM v11.1 supports Service-Task Addon

- Add "Auto-posting to Slack" icon to your process modeling pallet!

Kyoto, Japan - September 5th, 2016 - Questetra, Inc., the global SaaS provider of Business Process Management (BPM), today announced that they have published the new version 11.1 of the Cloud-based Workflow product "Questetra BPM Suite" on Sep 5th, 2016. In this new version 11.1, it has become capable of addition of Modeling Elements which were not included as standard function, such as "Automatic submission to other Cloud" or "Automatic conversion to CSV format". (Service-Task addon feature)

To formulate "Quotation submission" into Workflow (Business system), for example, a Process-owner (administrator of business operation) would arrange several human-processing Steps and automated Steps to create a Business Process Definition (Modeling). Specifically, to define by drag & drop placement of Step-icons, such as #1) Drafting, #2) Approving, #3) Submitting, #4) Reporting the Result, #5) Storing the PDF of Winning Quotation into File Server.

Thus far, it was also possible for anyone to realize automatization of processing easily with icons of pre-equipped Auto-processing Steps, such as "Auto-generation of PDF" and "Auto-storing to Google Drive". However, to create an Auto-step icon for a processing that is not prepared as a standard Modeling Element, advanced configurations were required, such as writing a Script. With the new version 11.1, it is capable of adding Modeling Elements by importing Add-ons that specifies data treatment and request procedure. That will allow you an easy drag & drop placement of Auto-processing Step icon, such as "Sharing Win-loss information with other department on Slack". This will help Questetra users to promote "Improvement of productivity" by using automated Steps.

Service-Task Addon feature

Questetra BPM Suite

Cloud-based Workflow "Questetra BPM Suite" is a business platform for realizing environments of paperless and remote-working. On arriving of a business issue at a Step, a login user (worker) processes in a specified manner and enters the work result, then it goes to the next Step automatically. Its most outstanding feature is its capability of mouse-driven configuration of "Business flow". This feature allows a Process-owner to continue to iterate the Improvement cycle on his/her own in day-to-day work. (BPM: Business

Process Management). Since it is applicable not only to simple business operations such as "Decision-making request" or "Document translation", but also to more complicated operations such as "Pre-shipment Quality check" and "Invoicing-Payment confirmation", it allows to centrally visualize the progress of various in-house businesses. More than 500 of importable Business Samples have been published. (<http://en.workflow-sample.net/>)

Service-Task Addon feature

By importing Service definition files (Add-on XML) in advance, custom Service Step (Service Tasks) will become available for Business Modeling. It is also possible to create definition files (Add-on XML) on your own, in case where you could not find what you want.

- Method of Adding Modeling Elements: <https://www.questetra.com/tour/m4/m415/>
- Method of Creating Service definition file: <https://www.questetra.com/tour/m4/m416/>
- Utilizing Scene of Service Step: <http://en.workflow-sample.net/2016/08/automated-step-5.html>

Importing Addon-XML

Other Improvements

Enhancement on Script Step:

In [Script Step] (Script Task) that is for Auto-processing, "Method of HTTP request transmission" and "Method of Email transmission" become available. It will be able to complete only by [Script Step] for the external communication processing, that has been separately arranged as [Throwing Message Intermediate Event], thus far. Also, due to the addition of external communication function, time-out period of the Auto-processing Step will be extended to 30 seconds from two seconds. (Likewise, 30 seconds limitation to [Service Step] that has been added by Add-on XML.)

Renewal of the function of collective setting of Editing permission on all Human Steps:

We have changed the Access level configuration (read/write setting) which is a matrix structure of Processing-step and Business data, to a more graphical configuration screen. Moreover, the configuration of Access level becomes capable of importing and exporting in CSV format.

OAuth 2.0 for [Developer APIs]:

Concerning [Developer APIs] which responds to requests from external (Workflow APIs and System Settings APIs), communication in OAuth 2.0 is available now. Although communication in Basic Authentication and in OAuth 1.0 is available currently, OAuth 1.0 has become deprecated and will be unsupported in future versions.
